PROFESSIONAL SUMMARY

Software engineer with 8+ years of experience in full-stack development, AR/VR applications, and cloud-based solutions. Built enterprise platforms (Flask, MySQL) used by 50+ stakeholders, AR analytics portals with REST API integrations, and industrial IoT monitoring systems interfacing with PLC hardware. Completed an MS in IT Management with a concentration in Generative AI for Business, building RAG pipelines, LLM applications, and deploying across AWS, Azure, and GCP. Dual bachelor's in ECE and Interactive Media from WPI.

CORE COMPETENCIES

Python

JavaScript

TypeScript

C#

SQL

React

Node.js

Flask

Django

REST APIs

Git

MySQL / PostgreSQL / MongoDB

TensorFlow / PyTorch / scikit-learn

LangChain / RAG

Claude Code / Cursor

Unity / Unreal Engine

Vuforia / ThingWorx

AWS / Azure / GCP

3D Modeling (Maya, Blender, Creo)

Power BI / Tableau

EXPERIENCE

University of North Carolina at Greensboro (UNCG) August 2024 - May 2026

Graduate Student - Generative AI for Business Greensboro, NC

- Built and deployed generative AI applications using Llama models and LangChain, implementing retrieval-augmented generation (RAG) and chain-of-thought reasoning to apply LLM and transformer architecture concepts in practice.
- Applied hyperparameter optimization techniques to fine-tune generative AI application performance, translating theoretical foundations into measurable model improvements.
- Built end-to-end dashboards in Tableau, Power BI, and Python (Seaborn, Glean) visualizing sales trends, regional performance, and category breakdowns.
- Cleaned and transformed raw datasets using Python (pandas) and Excel (VBA), resolving missing values, duplicates, and inconsistencies to prepare data for analysis and visualization.
- Evaluated and containerized applications across AWS, Azure, and GCP, applying industry-standard DevOps practices for cloud deployment across all three major platforms.

Harpak-ULMA Packaging November 2020 - August 2025

Augmented Reality Developer Taunton, MA

- Owned end-to-end design and delivery of an enterprise quoting and invoicing platform (Flask, MySQL) used by ~50 stakeholders, reducing cycle time from weeks to minutes and establishing a repeatable, measurable workflow standard.
- Defined and tracked engagement KPIs across dozens of AR experiences by developing a Vuforia/ThingWorx REST API-integrated analytics portal, translating user progression data into actionable insights for product improvement decisions.
- Architected an OEE monitoring system (FreeBasic) deployed on EWON industrial IoT gateways, interfacing directly with PLC systems via tag tables to capture live production metrics, automate end-of-shift reporting, and enable shift-level performance benchmarking.
- Developed dozens of optimized CAD models and 3D animations in Creo Parametric and Creo Illustrate, translating complex assembly and operational content into interactive visual guides for Vuforia-based AR/VR training experiences, product demos, and digital twin applications.
- Established documentation standards that codified institutional knowledge, accelerating onboarding and improving data consistency across engineering and maintenance teams.

Volvo Group June 2018 - September 2020

Associate Engineer Greensboro, NC

- Saved the company \$600,000 by leading internal development of a previously outsourced global project.
- Led development of a truck reservation system (Flask, MySQL) for a 10-15 person diagnostic engineering team, giving technicians real-time visibility into truck availability and floor location to streamline scheduling workflows.

- **Developed full-stack web apps (Flask, Node.js, MongoDB)** to prototype truck diagnostic tooling, reducing vehicle downtime through real-time data visibility.
- **Optimized and integrated 3D models from 3DS Max into Unity** to prototype an AR-powered truck diagnostic application, translating physical vehicle components into interactive digital overlays.
- **Participated in the Volvo Rotational Engineering Program** across four countries (USA, Sweden, France, India), gaining cross-functional and international engineering exposure.

TECHNICAL SKILLS

Generative AI/LLM: OpenAI, Gemini, Claude Code, Cursor, LangChain, RAG, Prompt Engineering, Chain-of-Thought

ML Frameworks: TensorFlow, PyTorch, Keras, scikit-learn, NLTK, spaCy

AR/VR & 3D: Unity, Unreal Engine, Vuforia, ThingWorx, Maya, 3DS Max, Blender, ZBrush, Creo Parametric, KeyShot

Languages: Python, JavaScript, TypeScript, SQL, C#, Java, Visual Basic, FreeBasic **Frameworks:** Flask, Django, React, Node.js, Angular, Vue

Databases: MySQL, PostgreSQL, MongoDB **Cloud & DevOps:** AWS, Azure, GCP, Docker, Git, CI/CD

Data Visualization: Power BI, Tableau, pandas, NumPy, Matplotlib, Seaborn

EDUCATION

Master of Information Technology Management - Generative AI for Business, UNCG May 2026
Certificate in Business Analytics | Certificate in Cloud Computing and Security Analytics | Certificate in Information Technology Development

BS Electrical & Computer Engineering, BS Interactive Media & Game Development, Worcester Polytechnic Institute May 2018
Minor in Spanish

CERTIFICATIONS & HONORS

ThingWorx Associate Certification 2024

Creo Associate Certification 2024

Creo Surfacing Professional Certification 2024

Gold Award Recipient, Girl Scouts of the Chesapeake Bay

Fluent in Spanish and English
